WP 6000 – High-pressure Compressor

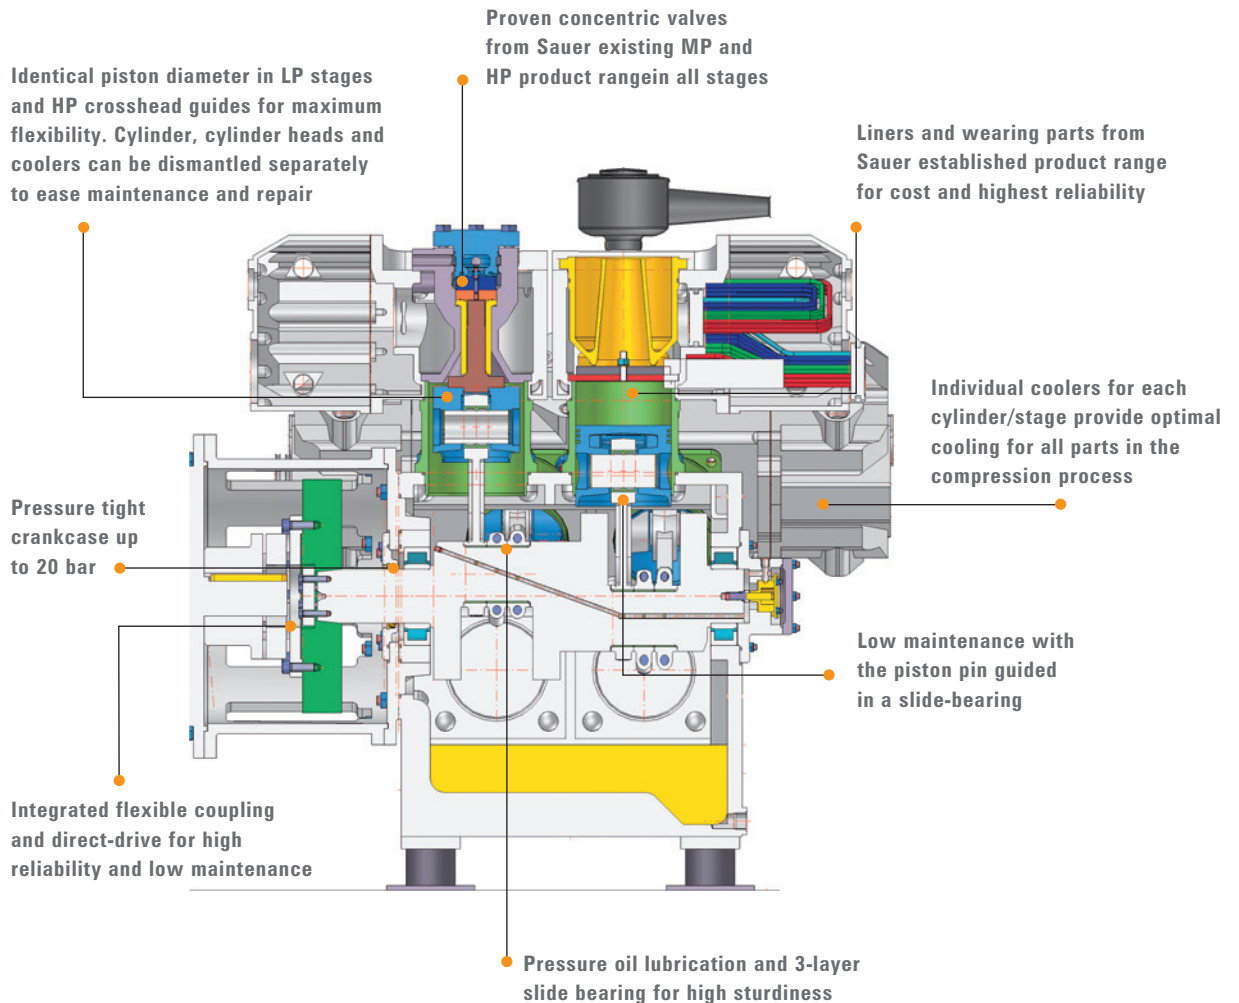

WP 6000 – the new Sauer High Pressure Compressor providing the exact specification to meet your requirements

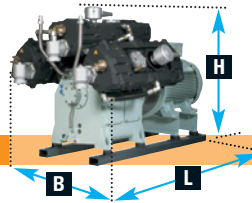

The industrial market has its own very specific demands. The new **WP 6000** can meet them with turn-key water-cooled compressor packages that provide air or gas for your task.

The **WP 6000** is a new concept from Sauer. With up to six-cylinders the compressor, or gas booster, has a totally flexible design which can be optimised to meet your precise specification. It can handle air or gases with a suction pressure anywhere from atmospheric to 20 bar and will deliver air or gas at any pressure from 10 to 400 bar with flow-rates from 250 to 2000 m³/h.

Based upon Sauer vast experience with water-cooled warship compressors for the World Navies the **WP 6000** is cooled by water. For industry water-cooled compressors remain the ‘workhorse’ for such large compressors as the **WP 6000**, powered by an electric motor or diesel engine from 90 kW up to 230 kW.

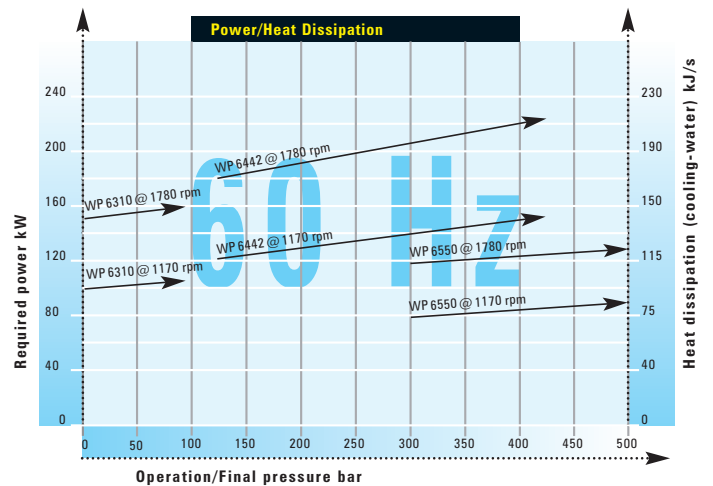

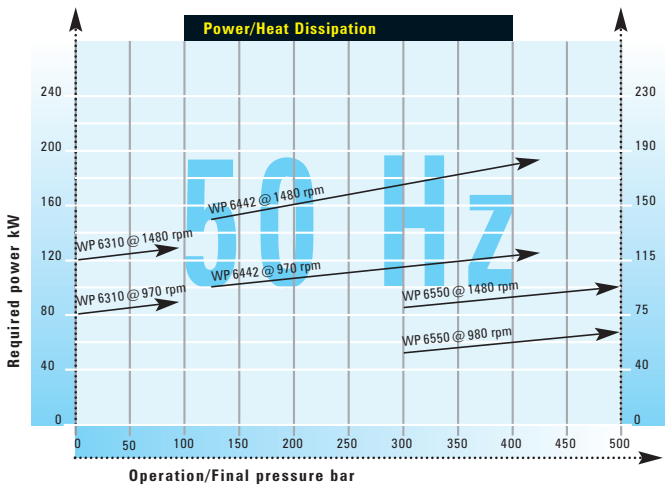

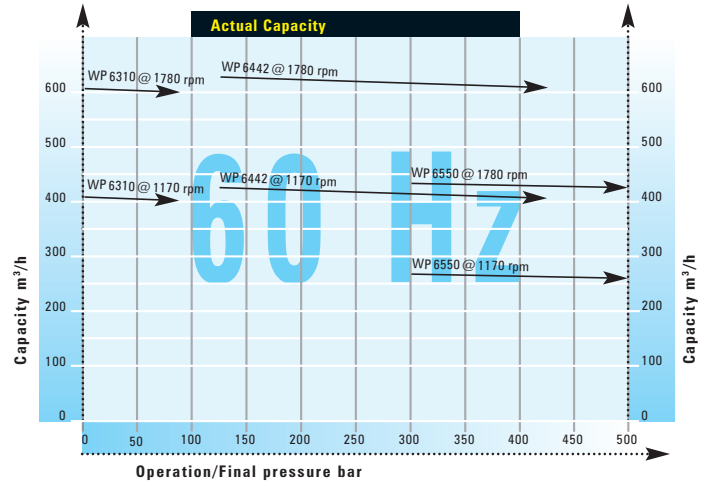

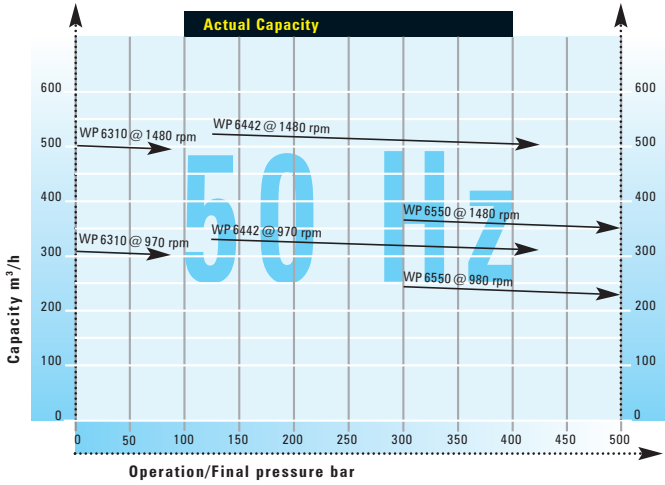

Whatever the customers’ specification the **WP 6000** can be readily adapted using any combination of cylinders, or compression stages, to meet the precise requirement for flow and pressure.

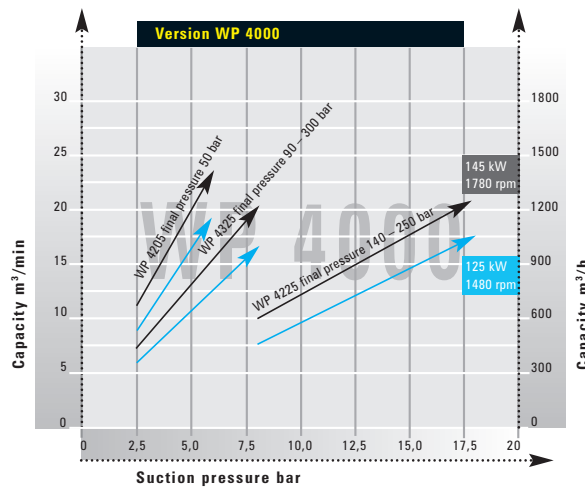

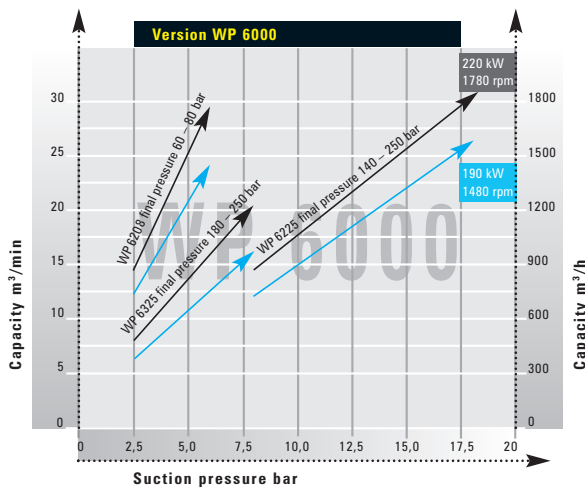

Weight: 3500 kg
 Dimensions: L 2800 mm
 B 1600 mm
 H 1800 mm
